## Chapter 1: Output Settings

When using USB to connect the scanner and host, users can choose USB HID-KBW, USB virtual serial port or USB HID-POS according to actual needs.

### 1.1.1 USB HID-KBW

**USB HID-KBW:** In keyboard mode, place the mouse cursor on the notepad, etc., and the data will be entered into the notepad after successful decoding.

**USB HID POS:** Enumerate into HID, and communicate using HID POS protocol.

USB HID-KBW  
\$>.S0F0116.<\$  
(Default)

USB HID POS  
\$>: S0F0516.<\$

Exit setup

Enter setup

---

## 1.1.2 USB Virtual Com

**USB Virtual Com:** Enumerate into a virtual serial port. At this time, the PC needs to use the serial port assistant to receive data.

USB Virtual Com  
\$>: S0F0216.<\$

Exit setup

Enter setup

---

## 1.2 Communication Interface Settings

Serial communication interface is a common way to connect scanner and host equipment (such as PC, POS and other equipment). When using the serial communication interface, the scanner and the host device must match the communication parameter configuration completely to ensure smooth communication and correct content.

## 1.2.5 Fluid Control

Non

\$>:S600016.<\$  
(Default)

RTS Fluid Control

\$>:S602016.<\$  
(Not currently supported)

CTR Fluid Control

\$>:S604016.<\$  
(Not currently supported)

CTS&RTS Fluid control

\$>:S606016.<\$  
(Not currently supported)

Exit setup

Enter setup

### 1.3 Keyboard language

The keyboard key arrangement, symbols, etc. corresponding to different national languages are different. The scanner can be virtualized into keyboard formats of different countries as needed, and the default is the keyboard of the first format.

US(Default)  
\$>:S1F001D.<\$

## 1.4 Character Encoding

### Original data transmission:

The original decoded data adopts decimal encoding.

Transfer to internal code to send: According to the keyboard language settings of different countries, the decoded data will be converted into the corresponding national internal code and sent; please cooperate with the "keyboard format setting HID-KBW" setting.

Raw data sending  
\$>:S070019.<\$  
(Default)

Convert to internal code and send  
\$>:S070319.<\$

Convert to UNICODE  
\$>:S070519.<\$

### Encoding preset

**Example:** If the barcode binary code is SHIFT JIS and the content is Russian, at this time, turn off the Chinese output first, select RUSSIA for the national language keyboard layout, and the HID input code is preset to SHIFT JIS, converted to internal code and sent, it will be output correctly Russian.

When HID transmission mode-original data transmission, HID input code preset-invalid!!!

Auto  
\$>:SF0000C.<\$  
(Default)

GBK2312  
\$>:SF0100C.<\$

Exit setup

Enter setup

---

UTF-8

\$>:SF0200C.<\$

BIG-5

\$>:SF0300C.<\$

SHIFT JIS

\$>:SF0400C.<\$

## Chinese output quick settings

You can set Chinese output to TXT or WORD.

Chinese output to TXT

\$>:SHTCT01.<\$

Chinese output to WORD

\$>:SHTCT02.<\$

Turn off Chinese output

\$>:SHTCT03.<\$

Exit setup

Enter setup

## 1.5 Invoice scan mode

The QR content format of different invoices is different. After enabling this function, the decoded result will be analyzed and reorganized according to certain rules. Only the national tax is supported.

**National tax regulations:** Start character \$+version number 01+base64 (name</>taxpayer identification number</>address telephone</>account opening bank and account number</>CRC)+terminator \$.

Disable

\$>:S0F002A.<\$

( Default )

National tax

\$>:S01002A.<\$

Exit setup

Enter setup

---

## 1.6 CTRL+Mode output

Function keys refer to F1-F12. To output Enter, you also need to set "output function keys"

Output function keys  
\$>:S070036.<\$  
(Default)

Output CTRL key combination  
\$>:S070136.<\$

### Example: Set the prefix to "F8" (hexadecimal value is 0x1D)

- 1) Scan "Enter setup" barcode
- 2) Read the code "Allow adding custom prefixes"
- 3) Read the "Set Custom Prefix" code
- 4) Read the following data codes: "1" "D" (in Appendix)
- 5) Scan "Save code" barcode (in Appendix)
- 6) Scan "output CTRL key combination" barcode
- 7) Scan "Exit setup" barcode

Exit setup

Enter setup

## 1.7 Keyboard mode setting

### Keyboard input mode

Standard keyboard input mode

\$>:S030037.<\$

Virtual keyboard input mode

\$>:S030337.<\$

Keyboard emulation input character mode

\$>:S030237.<\$

(Not support)

Disk emulation input control character mode

\$>:S030137.<\$

(Not support)

### Capslock

No Case Conversion

\$>:S380037.<\$

Letter case interchange

\$>:S380837.<\$

Conver All to Upper Case

\$>:S382037.<\$

Conver All to Lower Case

\$>:S383037.<\$

Exit setup

Enter setup

## ALT+S special settings for digital output

When outputting internal code, if alt+digital output is used, the first digit is zero, then the received input method needs to set the corresponding national keyboard, otherwise it may be garbled; if the first digit does not add zero, the received system code needs to be consistent with the internal code output from the scanner, otherwise garbled codes may appear.

When the keyboard can not output standard ASCII characters, you can choose to use ALT+number instead of output.

Set zero before not output

\$>:S080036.<\$

Output leading zero

\$>:S080836.<\$

(Default)

Keyless ASCII is not output

\$>:S100036.<\$

(Default)

ALT+Numbers instead of keyless ASCII

\$>:S101036.<\$

Exit setup

## 2 System settings

### 2.1 Enter setup&Exit setup

The user can scan the "Enter setup" code to enable the scanner setup function. After it is turned on, you can modify the parameters by reading one or more corresponding function setting codes, and finally scan the "Exit setup" code to make the setting effective.

Operation steps: You must first scan the "Enter setup" code, then scan the code of the corresponding function, and finally scan the "Exit setup" code. After scanning the "Exit setup" code, the scanner will automatically restart and enter a new working mode.

Enter setup  
\$>:S01010F.<\$

Exit setup  
\$>:S01000F.<\$  
( Default)

Enter setup

## 2.2 Scan Mode

### 2.3 Manual Reading Mode

Manual mode-keep button down, press the button to trigger the reading, and release the button to end the reading. If the reading time is successful or the reading time exceeds the single reading time, the reading will end.

\*Manual mode-Keep button down  
\$>: S03001A.<\$  
( Default )

#### 2.3.1 Automatic Scanning Mode

In the induction mode, you can activate the scanner to work by pressing a button, sending a command, or automatically sensing.

Induction trigger (command + button + induction)  
\$>: S03011A.<\$

Exit setup

Enter setup

---

## 2.4 Continuous Scanning Mode

Continuous Scanning Mode ,no manual trigger required, When reading succes or after the end of single code reading time , will automatically start the next reading. ( Continuous scanning period can switch to manual mode by press the button temporary.)

Continuous Mode  
\$>: S03021A.<\$

Exit setup

Enter setup

---

## Read interval setting

Read interval setting

\$>: R000302.<\$

**Example: Set the reading interval to 500ms (data code expressed in hexadecimal)**

- 1) Scan "Enter setup" barcode
- 2) Scan "Reading interval time setting" barcode
- 3) Scan data code "1" (in Appendix)
- 4) Scan data code "F" (in Appendix)
- 5) Scan data code "4" (in Appendix)
- 6) Scan "Save code" barcode (in Appendix)
- 7) Scan "Exit setup" barcode

Exit setup

Enter setup

## Single reading time

Enabling the reading, the reading has been failed, and the reading will be turned off automatically when the timeout is reached

Single reading time

\$>: R000064.<\$

**Example: Set the single reading time to 4000ms (The data code is expressed in hexadecimal)**

- 1) Scan "Enter setup" barcode
- 2) Scan the "single reading timeout setting" code
- 3) Scan data code "F" (in Appendix)
- 4) Scan data code "A" (in Appendix)
- 5) Scan data code "0" (in Appendix)
- 6) Scan "Save code" barcode (in Appendix)
- 7) Scan "Exit setup" barcode

Exit setup

Enter setup

## The same bar code reading delay time

To control the consecutive same barcode reading interval by setting the same barcode delay

Scan same code without delay

\$>:S100017.<\$

Scan same code delay

\$>:S101017.<\$

Same reading time setting

\$>: R000322.<\$

Exit setup

Enter setup

## Sensitivity

For the induction trigger mode, the user can set the sensitivity of different gears. The higher the sensitivity, the more sensitive to environmental changes. To avoid unnecessary reading, the appropriate gear should be set according to actual scene requirements.

Ultra high sensitivity  
\$>:S3F0034.<\$  
( Default)

High Sensitivity  
\$>:S3F0534.<\$

Medium Sensitivity  
\$>:S3F1034.<\$

Low Sensitivity  
\$>:S3F3034.<\$

Exit setup

Enter setup

## 2.5 Sleep settings

### 2.5.1 Enable/Disable sleep

**Sleep mode:** Refers to the sleep mode when there is no operation for a period of time, and some resources will be shut down.

Disable automatic sleep

\$>:S200017.<\$  
( Default)

Enable automatic sleep

\$>:S202017.<\$

### 2.5.2 Sleep duration setting

Sleep time

\$>:R000012.<\$

Sleep duration refers to how long it takes to enter sleep after no action, or how long to wake up after entering sleep.

**Example: Set the sleep duration to 1000ms (The data code is expressed in hexadecimal)**

- 1) Scan "Enter setup" barcode
- 2) Scan "Sleep time" barcode
- 3) Scan data code "3" (in Appendix)
- 4) Scan data code "E" (in Appendix)

Exit setup

Enter setup

---

- 5) Scan data code "8" (in Appendix)
- 6) Scan "Save code" barcode (in Appendix)
- 7) Scan "Exit setup" barcode"

Exit setup

Enter setup

## 2.6 Scan successfully set

### 2.6.1 Turn on/off beep

Turn on the prompt tone for successful reading (setting code)

\$>:S020229.<\$  
( Default)

Turn off the prompt tone for successful reading (setting code)

\$>:S020029.<\$

Turn on the prompt tone for successful reading (not setting code)

\$>:S040429.<\$  
( Default)

Turn off the prompt tone for successful reading (not setting code)

\$>:S040029.<\$

### 2.6.2 Same code tone on/off

The same code tone is on

\$>:S010135.<\$

Turn off the same code tone

Enter setup

## 2.8 Image property settings

In some application scenarios, the default image may not meet the decoding needs. At this time, you can turn on/off certain image properties (such as Image sharpening) to meet the decoding needs in special scenarios.

The basic steps of image attribute setting are as follows:

- Enable setting code
- Set on/off image properties
- Use can image extension settings

For example, to turn off the function of [Image Sharpening], follow the setting steps as follows:

- 1) Scan code: [open settings]
- 2) Scan code: [Image sharpening] disable
- 3) Scan code: [Image extension settings] enable

### 2.8.1 Image extension setting enable

\$>:S010123.<\$

Image extension settings  
Enable

\$>:S010023.<\$

Image extension settings  
Disable (Default)

### 2.8.2 Image sharpening

\$>:S020223.<\$

\$>:S020023.<\$

Exit setup

Enter setup

Image sharpening  
Enable (Default)

Image sharpening  
Disable

## 2.8.3 Decoding timeout setting

**Decoding timeout:** used to control the decoder to exit the decoding of the current image with the set timeout time and proceed to the decoding of the next image when the decoding fails.

### 1D Decoding timeout setting

\$>:S01010B.<\$

Open 1D code  
timeout  
(Default)

\$>:S01000B.<\$

Turn off 1D code  
timeout

### 1D code decoding timeout time setting

\$>:R001A04.<\$

1D code decoding  
timeout

### 2D Decoding timeout setting

\$>:S02020B.<\$

Open 2D code

\$>:S02000B.<\$

Turn off 2D code

Exit setup

Enter setup

---

timeout  
( Default)

timeout

## 2D code decoding timeout setting

\$>:R001A44.<\$  
2D code decoding  
timeout

### 2.8.4 Vertical scan

**Function description:** When this setting is turned on, the decoding will increase the vertical scanning to improve the success rate of the decoding, but if the decoding fails, the decoding time will increase

\$>:S010122.<\$

Turn on vertical  
scan

\$>:S010022.<\$

Turn off vertical  
scan  
( Default)

Exit setup

Enter setup

---

## 2.9 Lighting settings

### 2.9.1 Illumination

Lighting function one: the environment when the picture is taken; function two: prompt of decoding completion

Off

\$>:S0C0000.<\$

Reading On

\$>:S0C0400.<\$

On

\$>:S0C0800.<\$

Exit setup

Enter setup

---

## 2.9.2 Aiming

Off

\$>:S300000.<\$

Reading On

\$>:S301000.<\$

On

\$>:S302000.<\$

Exit setup

Enter setup

### 2.9.3 Dim light automatic light on setting

\$>:S020021.<\$

Dim light  
automatically turns  
on and  
disables(Default)

\$>:S020221.<\$

Dim light  
automatically turns  
on and disables

When the dark light environment is enabled, the decoder detects the image according to the set [Detection Time], and judges it in a dark light environment according to the [Detection Threshold]. When the detected value is less than the set threshold. Then the decoder automatically turns on the light.

\$>:R0019C2.<\$

Low light detection  
time setting

Dark light detection threshold  
setting

\$>:R0019E1.<\$

#### Dark light detection time and dark light detection threshold setting setting steps

- 1) Scan code [Enable setting code]
- 2) Scan code [dark light detection time setting] or 【\$>:R0019E1.<\$】
- 3) Scan code [digital code]
- 4) Scan code [digital code save]

Exit setup

Enter setup

### 3 Data editing

In practical applications, we sometimes need to edit the read data before outputting it to facilitate data differentiation and processing.

Data editing includes: adding prefix, adding suffix, decoding information, adding terminator

The default output sequence of processed data is as follows: <prefix>  
<barcode data><suffix><terminator>

#### 3.1 Prefix/Suffix Setting

All types of prefixes and suffixes are allowed

\$>:S80804E.<\$  
(Default)

Do not add any prefixes and suffixes

\$>:S80004E.<\$

#### 3.2 Prefix order setting

Custom prefix + Code ID + AIM ID

\$>:S01014E.<\$

Code ID + Custom prefix + AIM ID

\$>:S01004E.<\$  
(Default)

Exit setup

Enter setup

## 3.3 Custom prefix

**Custom prefix:** The custom prefix adds a user-defined string before the decoded information. For example, it is allowed to add a custom prefix and set the prefix to the character string "AB". After reading the barcode with the data "123", the scanner adds the character string "AB" before the character string "123", and the host receives "AB123" ;

### 3.3.1 Enable/Disable adding custom prefix

Allow adding custom prefixes

\$>:S04044E.<\$

Do not add custom prefixes

\$>:S04004E.<\$

( Default )

### 3.3.2 Set custom prefix

Set custom prefix

\$>: R000505.<\$

**Example: Set custom prefix to "CODE" ( The hexadecimal value is 0x43/0x4F/0x44/0x45 )**

- 8) Scan "Enter setup" barcode
- 9) Read the "Set Custom Prefix" code
- 10) Scan data code: "4<sup>m</sup>3<sup>m</sup>4<sup>m</sup>F<sup>m</sup>4<sup>m</sup>4<sup>m</sup>4<sup>m</sup>5" (in Appendix)

Exit setup

Enter setup

- 11) Scan "Save code" barcode (in Appendix)
- 12) Read the code "Allow adding custom prefixes"
- 13) Scan "Exit setup" barcode"

### 3.4 AIM ID Prefix

AIM is the abbreviation of Automatic Identification Manufacturers (Association of Automatic Identification Manufacturers). AIM defines identification codes for various standard bar codes, which are defined in Appendix). The scanner can add this identification code before the barcode data after decoding, that is, the AIM ID prefix.

Allow add AIM ID  
\$>:S010182.<\$

Prohibit add AIM ID  
\$>:S010082.<\$  
(Default)

\$>:DEFXXC2.<\$  
all barcodeCode IDRestore factory default value

Exit setup

Enter setup

## 3.5 CODE ID prefix

In addition to the AIM ID prefix can be used to identify different bar code types, users can also use the Code ID prefix to identify bar code types. Unlike the AIM ID prefix, the Code ID prefix corresponding to each barcode type can be customized. The CodeID of all barcodes is 1 or 2 characters, and must be letters, and cannot be set as numbers, invisible characters, or punctuation marks, etc.

### 3.5.1 Allow/prohibit adding CODE ID prefix

Allow to add CODE ID prefix  
\$>:S02024E.<\$

Prohibit add CODE ID prefix  
\$>:S02004E.<\$  
( Default)

### 3.5.2 Setting CODE ID prefix

Please refer to the following example for the method of modifying Code ID.

**Example: Modify the Code ID of Code 128 to "p" (the hexadecimal value is 0x70)**

- 1) Scan "Enter setup" barcode
- 2) Scan "CODE128 CODE ID setting" code
- 3) Scan data code: "7" (in Appendix)
- 4) Scan data code: "0" (in Appendix)
- 5) Scan "Save code" barcode (in Appendix)
- 6) Scan "Allow to add CODE ID prefix" code
- 7) Scan "Exit setup" barcode

Exit setup

Enter setup

---

Exit setup

---

Enter setup

## 3.6 Custom suffix

**Custom suffix:** The custom suffix is to add a user-defined string after decoding the information. For example, it is allowed to add a custom suffix and set the suffix to the character string "AB". After reading the barcode with the data as "123", the scanner adds the character string "AB" after the character string "123", and the host receives "123AB" .

**Note:** The total length of the custom suffix string cannot exceed 5 characters.

### 3.6.1 Allow/prohibit addingCustom suffix

Allow to addCustom suffix

\$>:S08084E.<\$

Prohibit addCustom suffix

\$>:S08004E.<\$

( Default )

### 3.6.2 Setting Custom suffix

Setting Custom suffix

\$>:R0005B5.<\$

**Example: Setting custom prefix is "CODE" (hexadecimal value is 0x43/0x4F/0x44/0x45)**

- 1) Scan "Enter setup" barcode
- 2) Scan "Setting Custom suffix" code
- 3) Scan below data code: "4"3"4" F"4"4"4"5" (in Appendix)

Exit setup

Enter setup

---

- 4) Scan "Save code" barcode (in Appendix)
- 5) Scan "Allow to addCustom suffix" code
- 6) Scan "Exit setup" barcode"

Exit setup

Enter setup

## 3.7 Suffix

The terminator suffix (such as carriage return, line feed) is used to mark the end of a complete data message. The terminator suffix must be the last content when a piece of data is sent, and there will be no additional data after that.

Note: The total length of the terminator suffix string cannot exceed 5 characters.

### 3.7.1 Enable / Disable Suffix

Enable suffix  
\$>:S10104E.<\$  
(Default)

Disable suffix  
\$>:S10004E.<\$

Exit setup

Enter setup

Read the following setting codes, you can quickly set the terminator to 0x0D (carriage return) or 0x0D, 0x0A (carriage return) or 0x09 (Tab), and allow adding terminator to send.

Set suffix

\$>:R000655.<\$

Set suffix 0x0D

\$>:DEFXXC3.<\$  
( Default)

Set suffix 0x0D,0x0A

\$>:DEFXXC4.<\$

Set suffix 0x09

\$>:DEFXXC5.<\$

Users can also customize the terminator suffix: first read "Setting terminator suffix", then read the hexadecimal value of the terminator suffix to be set in sequence, and finally read "Save".

Note: The total length of the terminator suffix string cannot exceed 5 characters.

**Example: Setting Custom suffix is 0x0A**

- 1) Scan "Enter setup" barcode
- 2) Scan "Set suffix" code
- 3) Scan below data code: "0" "A" (in Appendix)
- 4) Scan "Save code" barcode (in Appendix)
- 5) Scan "Enable suffix" code
- 6) Scan "Exit setup" barcode

Exit setup

Enter setup

### 3.8 Field interception

Field interception refers to the secondary editing of the scan code result. Assuming that the scan code result data contains a total length of K bytes, the first segment is M bytes and the latter segment is N bytes. The value range of M and N is 0-255.

Interception method and effect

Keep as it is

Reserve the first M bytes

Reserve N bytes in the back section

Reserve K-M-N bytes in the middle section

If you want to hide the previous data, N is set to 0, keep the middle, that is, K-M-0

If you want to hide the later data, set M to 0 and keep the middle, ie K-0-N

Keep only the front part

\$>:S180882.<\$

Keep only the back part

\$>:S181082.<\$

( Default )

Keep only the middle section

\$>:S181882.<\$

Keep origin

\$>:S180082.<\$

( Default )

For the setting of the M value in the front section and the N value in the back section, the set length is 0-255, that is, 0x00-0xFF.

For example, to set the M value to 18, the corresponding ASCII hexadecimal value is 12, first scan the "previous M value setting", then the numbers "1" and "2" respectively, and then scan the "save".

Exit setup

Enter setup

---

Front M value setting  
\$>:R000831.<\$

N value setting in the back section  
\$>:R000841.<\$

Exit setup

Enter setup

## 3.9 GS character conversion

GS character conversion refers to replacing the 0x1D contained in the content with the specified ASCII character.

### 3.9.1 Enable/ Disable GS character conversion

Enable GS characters conversion

\$>:S010181.<\$

Disable GS characters conversion

\$>:S010081.<\$

( Default )

### 3.9.2 Set GS Character conversion

Set GS Conversion

\$>:R0006A6.<\$

**Example:** Set the GS conversion to "#####" ( The hexadecimal value is 0x23/0x23/0x23/0x23 )

- 1) Scan "Enter setup" code
- 2) Scan "Set GS CONVERSION" code
- 3) Scan: "2"3"2"3"2"3"2"3" ( in Appendix )
- 4) Scan "Save" ( in Appendix )
- 5) Read the code "Enable GS characters Conversion"
- 6) Scan "Exit setup"

Exit setup

Enter setup

### 3.9.3 Quick setting code for special GS Conversion

Including replace with "[GS]", "(GS)", "<GS>" "GS" Four kinds

\$>:SHTCT04.<\$  
GS

\$>:SHTCT05.<\$  
<GS>

\$>:SHTCT06.<\$  
(GS)

\$>:SHTCT07.<\$  
[GS]

\$>:SHTCT08.<\$  
'GS'

\$>:SHTCT09.<\$  
'GS'

\$>:SHTCT0A.<\$  
|

\$>:SHTCT0B.<\$  
?

\$>:SHTCT0C.<\$  
\*

\$>:SHTCT0D.<\$  
<0x1D>

Exit setup

Enter setup

## 3.10 Set NGR information

After enable send NGR function code, when the decoding times out, the scanner will send user-defined NGR information to the host to determine the reading failure; users can set their own customized content by setting the NGR information. (NGR Maxi 7 characters!)

### 3.10.1 Enable/ Disable send NGR

Enable Send NGR

\$>:S40404E.<\$

Disable send NGR

\$>:S40004E.<\$

( Default )

### 3.10.2 Set NGR information

Set NGR information

\$>: R000767.<\$

**Example: Set NGR information to "FAIL" (hexadecimal value is 0x46/0x41/0x49/0x4C)**

- 1) Scan "Enter setup"
- 2) Scan the "Set NGR Information"
- 3) Scan the following data code: "4" "6" "4" "1" "4" "9" "4" "C" (in Appendix)
- 4) Scan "Save"(in Appendix)
- 5) Read the "Enabel send NGR"
- 6) Scan "Exit setup" barcode"

Exit setup

Enter setup

## 4 Barcode parameter setting

### 4.1 Global Setting

#### 4.1.1 Enable/Disable all barcode

Set "Disable all barcode", the scanner cannot read other codes except the setting code

Enable all barcode

\$>:S010187.<\$

Disable all barcode

\$>:S010087.<\$

#### 4.1.2 Enable/Disable read all 1D barcodes

Enable all 1D Codes

\$>:S020287.<\$

Disable all 1D code

\$>:S020087.<\$

#### 4.1.3 Enable/Disable read all 2D barcodes

Enable all 2D codes

\$>:S040487.<\$

Disable all 2D codes

\$>:S040087.<\$

**Note:** CODE128 and QR barcodes are enable, all setting codes cannot disable both of them.

Exit setup

Enter setup

#### 4.1.4 Enable/Disable all 1D/2D Reverse barcode

Enable all 1D reverse barcode

[\\$>:S080887.<\\$](#)

Disable all 1D reverse barcode

[\\$>:S080087.<\\$](#)

[\(Default\)](#)

Enable all 2D reverse barcode

[\\$>:S101087.<\\$](#)

Disable all 2D reverse barcode

[\\$>:S100087.<\\$](#)

[\(Default\)](#)

Exit setup

Enter setup

---

## 4.2 Code128/AIM128/EAN128/NL128

### 4.2.1 Enable/Disable

Enable

\$>:S010188.<\$  
( Default)

Disable

\$>:S010088.<\$

### 4.2.2 CODE ID

Set CODE128 CODE ID

\$>: R001342.<\$

Exit setup

Enter setup

### 4.2.3 Read barcode length setting

The user can set the maximum and minimum length of barcode reading. If the read barcode length does not match the set effective length, the barcode reading is unsuccessful, and the scanner will not send the data to the host.

The barcode length is composed of "minimum length" and "maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only this length is supported.

CODE 128 Maximum decoding length

\$>: R000C21.<\$

CODE 128 Minimum decoding length

\$>: R000C31.<\$

**Example: Limited the scanner only read minimum 8 characters and maximum 12 characters**

- 1) Scan "Enter setup"
- 2) Read "CODE 128 minimum decoding length"
- 3) Scan "8" (in Appendix)
- 4) Scan "Save " (in Appendix)
- 5) Scan the "CODE 128 maximum decoding length"
- 6) Scan "C" (in Appendix)
- 7) Scan "Save " barcode (in Appendix)
- 8) Scan "Exit setup" barcode"

Exit setup

Enter setup

---

## 4.3 UPC/EAN/ISSN/ISBN

### 4.3.1 Enable/Disable scan

Enable

\$>:S010189.<\$

( Default )

Disable

\$>:S010089.<\$

### 4.3.2 CODE ID setting

Set EAN CODE ID

\$>: R001362.<\$

Exit setup

Enter setup

### 4.3.3 Parity Bits transmission

EAN8 parity output  
\$>:S0101AA.<\$  
( Default)

EAN8 not parity output  
\$>:S0100AA.<\$

EAN13parity output  
\$>:S0202AA.<\$  
( Default)

EAN13not parity output  
\$>:S0200AA.<\$

UPCA parity output  
\$>:S0404AA.<\$  
( Default)

UPCA not parity output  
\$>:S0400AA.<\$

UPCE parity output  
\$>:S0808AA.<\$  
( Default)

UPCE not parity output  
\$>:S0800AA.<\$

Exit setup

Enter setup

#### 4.3.4 Set whether to enable scan additional codes

After setting it to "Read 2 digits additional code" or "Read 5 digits additional code", the scanner can read new barcodes composed of ordinary barcodes and additional codes, as well as ordinary barcodes without additional codes. After setting to "not read 2-digit additional code" or "not read 5-digit additional code", the part of the additional code in the new barcode composed of ordinary barcode and additional code will not be read, and the part of the ordinary barcode can still be read. Common sense reading.

Read 2-digit additional code  
\$>:S101089.<\$  
(Default)

Not read 2-digit additional  
code\$>:S100089.<\$

Read 5-digit additional code  
\$>:S080889.<\$  
(Default)

Not read 2-digit additional code  
\$>:S080089.<\$

#### 4.3.5 Set whether additional code is required

This parameter is only valid when the scanner has been set to read "2-digit additional code" or "read 5-digit additional code".

With additional code  
\$>:S808089.<\$

No additional code required  
\$>:S800089.<\$

Exit setup

Enter setup

---

( Default )

---

Exit setup

Enter setup

### 4.3.6 Extended settings

"Barcode information is not extended", mean keep all original types and data bits

"Extend the barcode information to 13 bits", mean expand the Data Bits of the barcode (prefix 0), but the barcode type does not change.

ENA8 to ENA13 OPEN  
\$>:S600089.<\$

ENA8 to ENA13 CLOSE  
\$>:S602089.<\$  
( Default )

( Default )

Barcode information 8 extension13  
\$>:S600089.<\$

Barcode information is not expanded  
\$>:S602089.<\$  
( Default )

Exit setup

Enter setup

---

## 4.4 Codabar

### 4.4.1 Enable/Disable

Enable

\$>:S01018C.<\$

Disable

\$>:S01008C.<\$

( Default )

### 4.4.2 CODE ID

Set CODABAR CODE ID

\$>: R0013E2.<\$

Exit setup

Enter setup

### 4.4.3 Parity settings

The check digit is not mandatory in the Codabar barcode data. If there is a check digit, it is the last character of the data. The check digit is a value calculated based on all data to check whether the data is correct.

Set to "No Check", the scanner will transmit all barcode data normally.

Set to "Check but not send check digit", the scanner will check according to the last 1 digit of the barcode. If the check is passed, it will transmit normal data except the check digit. If the check fails, it will prompt the barcode reading failure.

Set to "Check and send check digit", the scanner will check the last 1 digit of the barcode. If the check is passed, the check digit will be transmitted as the last 1 digit of normal data. If the check fails, it will be prompted to read the code failure.

None parity

\$>:S02008C.<\$  
( Default)

Check but not send check digit

\$>:S06028C.<\$

Check and send check digit

\$>:S06068C.<\$

Exit setup

Enter setup

#### 4.4.4 Scan length setting

The user can set the maximum and minimum length of barcode reading. If the read barcode length does not match the set effective length, the barcode reading is unsuccessful, and the scanner will not send the barcode content to the host.

The barcode length is composed of "minimum length" and "maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only this length is supported.

CODABAR Maximum decoding length  
\$>: R000C81.<\$

CODABAR Minimum decoding length  
\$>: R000C91.<\$

#### Example: To decode Plessey Symbols Containing between 8 and 12

##### Characters

- 1) Scan "Enter setup"
- 2) Scan "CODABAR Maximum decoding length"
- 3) Scan data code "8" (in Appendix)
- 4) Scan "Save" (in Appendix)
- 5) Scan "CODABAR Minimum decoding length"
- 6) Scan data code "C" (in Appendix)
- 7) Scan "Save" (in Appendix)
- 8) Scan "Exit setup"

Exit setup

Enter setup

---

Enter setup

## 4.5.6 Scan length setting

The user can set the maximum and minimum length of barcode reading. If the read barcode length does not match the set effective length, the barcode reading is unsuccessful, and the scanner will not send the barcode content to the host.

The barcode length is composed of "minimum length" and "maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only this length is supported.

CODE 39 Maximum decoding length  
\$>: R000C41.<\$

Exit setup

Enter setup

### 4.20.3 Set Lengths for PharmaCode One-Track

The user can set the maximum and minimum length of barcode reading. If the read barcode length does not match the set effective length, the barcode reading is unsuccessful, and the scanner will not send the barcode content to the host.

The barcode length is composed of "minimum length" and "maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only this length is supported.

Pharma\_One Maximum decoding length  
\$>: R0010A2.<\$

Pharma\_One Minimum decoding length  
\$>: R0010C2.<\$

#### **Example: To decode Plessey Symbols Containing between 8 and 12**

##### **Characters**

- 1) Scan the Enter Setup barcode
- 2) Scan "Pharma\_One Maximum decoding length"
- 3) Scan "8" (in Appendix)
- 4) Scan "Save " barcode (in Appendix)
- 5) Scan "Pharma\_One Maximum decoding length"
- 6) Scan the Pharma\_One Any Lengths Barcode
- 7) Scan "C" (in Appendix)
- 8) Scan "Save " barcode (in Appendix)
- 9) Scan "Exit setup"

Exit setup

Enter setup

## 4.21 PharmaCode Two-Track

### 4.31.3 Setting CODE ID

Hanxin CODE ID setting

\$>: R001772.<\$

Exit setup

Enter setup

#### 4.31.4 Scan length setting

The user can set the maximum and minimum length of barcode reading. If the read barcode length does not match the set effective length, the barcode reading is unsuccessful, and the scanner will not send the barcode content to the host.

The barcode length is composed of "minimum length" and "maximum length". If the maximum length is less than the minimum length, only barcodes of these two lengths can be read. If the maximum length is equal to the minimum length, only this length is supported.

HANXIN Maximum decoding length  
\$>: R000F22.<\$

HANXIN Minimum decoding length  
\$>: R000F42.<\$

#### **Example: Restrict the scanner to only read barcodes with a minimum of 4 bytes and a maximum of 100 bytes**

- 1) Scan "Enter setup"
- 2) Scan "HANXIN Minimum decoding length"
- 3) Scan "4" (in Appendix)
- 4) Scan "Save code" (in Appendix)
- 5) Scan "HANXIN Maximum decoding length"
- 6) Scan : "6" "4" (in Appendix)
- 7) Scan "Save " (in Appendix)
- 8) Scan "Exit setup" barcode"

Exit setup

Enter setup

## 5 Batch processing

When multiple settings are required to read the device, it may be cumbersome to set one by one. At this time, we can save all the information that needs to be set as a barcode information, and the device can complete multiple settings after reading the barcode.

The following are the guidelines for batch processing:

1. The format of each command in the batch command is command + parameter.
2. The command ends with a semicolon. Note that there can be no spaces between each command.
3. Make the command into a QR code in the coding software.
4. The batch command starts with `$>:BATCHST.<$` and starts with `$>:BATCHET.<$`

### Note:

The batch instruction cannot contain data code. Where data codes are needed, specify them by command + parameters.

For example: Set [Set Custom Prefix] to [A], it will be expressed as follows in batch processing: `$>:R000505.<$41;`

classification	instruction	parameter	=CONCATENATE(B3,C3)	Do you have to
Start instruction	<code>\$&gt;:BATCHST.&lt;\$</code>		<code>\$&gt;:BATCHST.&lt;\$</code>	Must indicate that the batch instruction starts
Open barcode	<code>\$&gt;:S01010F.&lt;\$</code>		<code>\$&gt;:S01010F.&lt;\$;</code>	
All types of prefixes and suffixes are allowed	<code>\$&gt;:S80804E.&lt;\$</code>		<code>\$&gt;:S80804E.&lt;\$;</code>	
Allow adding custom prefixes	<code>\$&gt;:S04044E.&lt;\$</code>		<code>\$&gt;:S04044E.&lt;\$;</code>	
Set custom prefix	<code>\$&gt;:R000505.&lt;\$</code>	41	<code>\$&gt;:R000505.&lt;\$41;</code>	
Close barcode	<code>\$&gt;:S01000F.&lt;\$</code>		<code>\$&gt;:S01000F.&lt;\$;</code>	

Exit setup

Enter setup

End of instruction	\$>:BATCHET.<\$		\$>:BATCHET.<\$;	Must indicate that the batch instruction End
--------------------	-----------------	--	------------------	--

The synthetic instructions are as follows:

**\$>:BATCHST.<\$>:S01010F.<\$;\$>:S80804E.<\$;\$>:S04044E.<\$;\$>:R000505.<\$41;**  
**\$>:S01000F.<\$;\$>:BATCHET.<\$;**

Exit setup

Enter setup
